Encyklopedia po nowemu

A new kind of encyclopaedia

The way that encyclopaedias are issued nowadays shows the changes taking place in the world of the media. Today, a paper copy is more and more often just an addition to the multimedia database on DVD discs. This is the case of the E 2.0. Encyclopaedia of the new generation" by PWN. In addition to a traditional paper book we get a disc including, among others, a geographical and historical atlas, as well as a panorama of the history of science, literature, art, and technology. The DVD room makes it possible to create one's own selection of entries, to add comments, to check one's knowledge by taking simple tests.

An important part of the "E 2.0" is the activation code that provides access to the www.E2.0.pwn.pl service containing the interactive "Omega" Science Database.

Between abstraction and life

Moralizing, as defined by Robert Zimmer, is a thought current that is located somewhere between the abstraction of philosophy and the hard facts of literature. A moralist turns out to be someone who mixes thorough knowledge with profound life wisdom. The aphorisms that a moralist often uses to express his thoughts constitute concise conclusions drawn from practical experiences and containing both teaching and advice. "European moralists" is a review of modern and contemporary thought: from Montaigne through La Rochefoucauld, La Bruyère, Chamfort, and Schopenhauer, to Brecht, Lec, and Cioran. Zimmer highlights the role of the rational and Enlightenment traditions that have had a decisive impact on the moralizing of the Old Continent.
